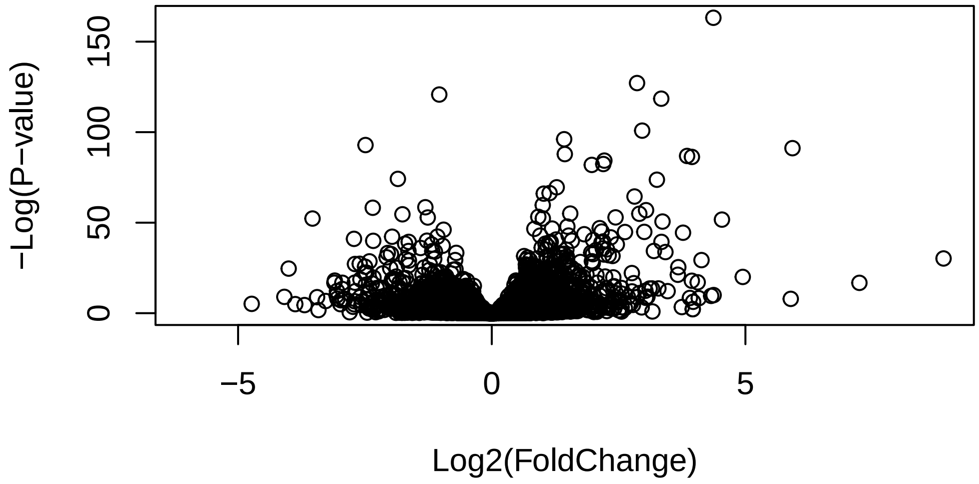
section 9: volcano plot

```r
plot( res$log2FoldChange,  -log(res$padj),
      xlab="Log2(FoldChange)",
      ylab="-Log(P-value)")
```



Pathway analysis

Now that I have added the neccessary annotation data I can talk to different databases that use these IDs,

We will used tge `gage` package to do geneset analysis (a.;.a. pathway analysis, geneset enrichment, overlap analysis)

```
library(pathview)
```

```
##############################################################################
Pathview is an open source software package distributed under GNU General
Public License version 3 (GPLv3). Details of GPLv3 is available at
http://www.gnu.org/licenses/gpl-3.0.html. Particullary, users are required to
formally cite the original Pathview paper (not just mention it) in publications
or products. For details, do citation("pathview") within R.

The pathview downloads and uses KEGG data. Non-academic uses may require a KEGG
license agreement (details at http://www.kegg.jp/kegg/legal.html).
##############################################################################
```

```r
library(gage)
```

```r
library(gageData)
```

We will use KEGG first

```r
data(kegg.sets.hs)
head(kegg.sets.hs, 2)
```

```
$`hsa00232 Caffeine metabolism`
[1] "10"   "1544" "1548" "1549" "1553" "7498" "9"

$`hsa00983 Drug metabolism - other enzymes`
 [1] "10"     "1066"   "10720"  "10941"  "151531" "1548"   "1549"   "1551"
 [9] "1553"   "1576"   "1577"   "1806"   "1807"   "1890"   "221223" "2990"
[17] "3251"   "3614"   "3615"   "3704"   "51733"  "54490"  "54575"  "54576"
[25] "54577"  "54578"  "54579"  "54600"  "54657"  "54658"  "54659"  "54963"
[33] "574537" "64816"  "7083"   "7084"   "7172"   "7363"   "7364"   "7365"
[41] "7366"   "7367"   "7371"   "7372"   "7378"   "7498"   "79799"  "83549"
[49] "8824"   "8833"   "9"      "978"
```

The main `gage()` function requires a named vector of fold changes, where the names of the values are the Entrez gene IDs.

```r
foldchange <- res$log2FoldChange
names(foldchange) = res$entrez
head(foldchange)
```

```
       7105       64102        8813       57147       55732        2268
-0.35070302          NA  0.20610777  0.02452695 -0.14714205 -1.73228897
```

Run the analysis

```r
# Get the results
keggres = gage(foldchange, gsets=kegg.sets.hs)
```

Let's look at what is in our results here

```r
attributes(keggres)
```

```
$names
[1] "greater" "less"    "stats"
```

```r
# Look at the first three down (less) pathways
head(keggres$less, 3)
```

```
                                      p.geomean stat.mean        p.val

hsa04940 Type I diabetes mellitus  0.14232581       42 0.0017820293
hsa05310 Asthma                    0.14232581       29 0.0020045888
```

I can now use the returned pathway IDs from KEGG as input to the `pathview` package to make pathway figures with our DEGs highlighted.

```r
pathview(gene.data=foldchange, pathway.id="hsa05310")
```

```
Info: Downloading xml files for hsa05310, 1/1 pathways..

Info: Downloading png files for hsa05310, 1/1 pathways..

'select()' returned 1:1 mapping between keys and columns

Info: Working in directory /Users/farnamtavakoli/Downloads/School Documents/UCSD Classes/Win

Info: Writing image file hsa05310.pathview.png
```
